

SPRAY BEFORE YOU STAY™

The SYNBIONT® Story

We fill an environmentally friendly void in a market full of toxic chemicals with warnings and precautions.

We care about our environment. We care about the animals that our product interacts with. We care about the high quality results our customers receive. We care ... and our products back us up.

Our History

We're a family-owned company with over 40 years in the agricultural industry. After realizing a legitimate need in the marketplace, we invested years of research and development to deliver the Synbiont line of products. Today, we can proudly say that our products make a difference and we use them in our own farms, barns and kennels.

Synbiont was initially developed for use in the fresh produce industry to enhance food safety efforts. Our chemistry was created to enhance commercial grower efforts to clean fruits and vegetables and help eradicate foodborne bacteria and viruses prior to human consumption.

The natural step into the animal health arena provides animal owners and animal facilities an effective, veterinarian approved, environmentally friendly alternative to help clean harmful pathogens such as E.Coli, Salmonella, Staphylococcus, Listeria, EHV-1 and Canine parvovirus.

Our Science

We utilize a unique and patented blending process of products that are fully compliant within the EPA and FDA code of federal regulations. Our blending process helps supercharge surfactant-based cleaning agents; creating a unique alternative to traditional biosecurity efforts with third-party efficacy testing to validate all claims.

All Synbiont products are created from a blend of anionic surfactants (negatively charged molecules) that demonstrate a unique penetrating and cleaning ability. These surfactants were selected because of their high water solubility and activity at low concentrations, with continued activity of 7-21 days. These biodegradable products help to remove the substrates on which microbes thrive while cleaning animals, their wounds and areas they frequent.

Our Difference

- *Food Grade Safe*
- *Animal Safe*
- *Biodegradable*
- *Non-toxic*
- *Fragrance Free*
- *Dye Free*

SYNBIONT Agricultural Wash

Synbiont Ag Wash is a versatile, multipurpose cleaning product for large animals and their surroundings

- Cleans areas prone to host pathogens, viruses, bacteria and fungi
- Apply to animal or anywhere they frequent (facilities, stalls, bridles, bits, water buckets and feeders)
- Unlike a disinfectant, it cleans an area in two ways: first it cleans the host area where pathogens grow by emulsifying dirt and soil and then it compromises the cell walls of the pathogen
- Used by commercial facilities, veterinarians and professional trainers
- Preferred alternative to harmful chemicals
- Extremely affordable
- Non-corrosive
- Recommended ratio of 1:50 (1 gallon of concentrate makes 50 gallons of multipurpose wash)
- Active ingredients: Food-grade safe blend of alkyl sulfonate and an alkyl sulfate 36%
- Available in: 1 Gallon; 5 Gallons & 55 Gallons

SYNBIONT Kennel Wash

Synbiont Kennel Wash offers a safe alternative to small animal cleaning

- Cleans away deadly viruses like canine parvovirus
- Cleans away harmful pathogens transferred from the dog park, footpaths, shows and trials to your animal and their surroundings
- Unlike traditional toxic sanitizing steps such as bleach or chlorine, Synbiont allows for an environmentally friendly alternative to cleaning
- Does not require re-entry restrictions
- Non-corrosive
- Can be used freely around your pets without toxic concerns
- Approved by veterinarians and used in commercial kennels
- Applications include spraying on animals, surgical rooms, kennel crates and mobile pet grooming
- Preferred application methods are spray bottles, hose-end sprayers or pump-up sprayers
- Recommended ratio of 1:50 (1 gallon of concentrate makes 50 gallons of multi-use wash)
- Active ingredients: Food-grade safe blend of alkyl sulfonate and an alkyl sulfate 36%
- Available in: 1 Gallon; 5 Gallons & 55 Gallons

SYNBIONT Wound Care

Synbiont Wound Care treats and accelerates the healing process in animal wounds

- We've diluted Synbiont's concentrated product to create a wound care product that enhances recovery time, is non-toxic and won't sting when applied due to its balanced pH
- Half the price of most competitors
- Safe to use around eyes, ears, nose and mouth ... even on the most sensitive animals
- Foaming action helps adhere to wounds and dressings
- Offers a bitter taste to discourage licking
- Compatible with other wound care products, antibiotics, and ointments
- Helps to clean the wound by penetrating the microbe cell membrane and eliminating dirt or organic matter where microbes thrive while not harming healthy tissue
- Ideal for mange, post-surgical sights, hot spots, scratches, ringworm, burns, skin irritations, thrush, bites, rashes and more
- Active ingredients: Food-grade safe blend of alkyl sulfonate and an alkyl sulfate 18%

Small Animal – Available in: 5oz & 8oz

Large Animal – Available in: 5oz & 8oz
